BUILDING VALUES

For almost 40 years, Basalite® has worked on growing our business by building relationships. We have created strong bonds with our dealers, masons, architects, engineers and licensed contractors. From working together with the common purpose of installing the finest hardscape products available, we have seen our products placed in settings that range from practical to magical. At Basalite®, we are committed to being the best in the industry. Our focus now, just as it was when we opened our doors all those years ago, is on service, quality and innovation. Those are the values that have made us the industry leader we are today and the same principles that will guide us far into the future.

NECESSARIES™ THE KITCHEN™

Necessaries™ The Kitchen in Positano with Black Pearl granite countertop. Outdoor Pizza Oven and Smoker sold separately.

DESIGN FEATURE

Each kit comes with everything you need to build!

A collection of granite-topped cabinets for backyard baking, grilling, dining and entertaining. Elegant, functional and affordable, these quality components and cabinets come with everything you need and are ready to assemble in any configuration you can imagine.

THE KITCHEN™ SIZZLER GRILL CABINETS

Special Order Custom Color

40" SIZZLER GRILL CABINET KIT

- 5 main burners
- 985 sq. in. cooking surface
- #443 stainless steel construction
- Push-to-turn knob ignition, 3" temp gauge
- 14,000 BTU #304 stainless steel burners
- 12,000 BTU infrared back burner
- Natural gas or propane fuel
- Double-lined hood assures optimal airflow
- 8mm cooking grates won't warp or rust
- Easy-clean briquette system for even heat
- 30" double stainless doors
- Choice of granite and block color

Optional 40" Deluxe Rotisserie - sold separately

Name	Metric Units	U.S. Customary Units	Weight	Pallets
40" Sizzler Grill Cabinet	1829mm W x 762mm H x 508mm L	56" W x 37" H x 28" L	2980 lbs	2

32" SIZZLER GRILL CABINET KIT

- 4 main burners
- 795 sq. in. cooking surface
- #443 stainless steel construction
- Push-to-turn knob ignition, 3" temp gauge
- 14,000 BTU #304 stainless steel burners
- 12,000 BTU infrared back burner
- Natural gas or propane fuel
- Double-lined hood assures optimal airflow
- 8mm cooking grates won't warp or rust
- Easy-clean briquette system for even heat
- 30" double stainless doors
- Choice of granite and block color

Optional 32" Deluxe Rotisserie - sold separately

Name	Metric Units	U.S. Customary Units	Weight	Pallets
32" Sizzler Grill Cabinet	1219mm W x 762mm H x 508mm L	48" W x 37" H x 28" L	2625 lbs	2

THE KITCHEN™ ISLAND CABINET

Special Order Custom Color

- Granite top measures 90" x 45"
- Two easy-glide stainless steel drawers and magnetic close door
- Available with or without 15" Stainless Steel Sink
- Choice of granite and block color

Name	Metric Units	U.S. Customary Units	Weight	Pallets
Island Cabinet Kit	1651mm W x 940mm H x 825.5mm L	65" W x 37" H x 32.5" L	4410 lbs	3

THE KITCHEN™ SIDE BURNER CABINET

Special Order Custom Color

- #304 stainless steel construction
- Push-to-turn knob ignition
- Easy-glide, enclosed stainless steel drawers
- 24,000 BTU solid brass burners
- 19.5" x 10.5" cooking surface
- Protective stainless steel cover
- Choice of granite and block color

Name	Metric Units	U.S. Customary Units	Weight	Pallets
Side Burner Cabinet Kit	813mm W x 940mm H x 711mm L	32" W x 37" H x 28" L	1995 lbs	1

THE KITCHEN™ REFRIGERATOR CABINET

Special Order Custom Color

- 24"W x 24"D x 36"H opening
- Choice of granite and block color

Refrigerator - Sold Separately

Name	Metric Units	U.S. Customary Units	Weight	Pallets
Refrigerator Cabinet Kit	813mm W x 940mm H x 711mm L	32" W x 37" H x 28" L	1125 lbs	1
Refrigerator	610mm W x 914mm H x 610mm L	24" W x 36" H x 24" L	155 lbs	1

THE KITCHEN™ PREP CENTER CABINET

Special Order Custom Color

- Two easy-glide stainless steel drawers and magnetic close door
- Choice of granite and block color

Drop In Sink - Sold Separately

- 15" L x 15" W x 6" D basin stainless sink
- Double handle valve stainless faucet
- Stopper/strainer

Name	Metric Units	U.S. Customary Units	Weight	Pallets
The Prep Center Cabinet Kit	1219mm W x 940mm H x 711mm L	48" W x 37" H x 28" L	2385 lbs	2

THE KITCHEN™ SMOKER & CABINETS

Special Order Custom Color

SMOKER, TRASH, CORNER AND TWO DRAWER CABINET KITS - EACH KIT SOLD SEPARATELY

Trash Cabinet Kit

- #304 stainless steel construction
- Easy-glide drawer accommodates 12 gal. trash can
- Choice of granite and block color

Smoker Cabinet Kit

- 24" W x 24" D opening
- Ideal for your smoker
- Choice of granite and block color

Smoker - Sold Separately

Corner Cabinet Kit

- Creates L-shaped kitchen designs
- Choice of granite and block color

Two Drawer Cabinet Kit

- Easy-glide, enclosed stainless steel drawers
- Choice of granite and block color

Name	Metric Units	U.S. Customary Units	Weight	Pallets
Trash Cabinet Kit	711mm W x 940mm H x 711mm L	28" W x 37" H x 28" L	2385 lbs	1

Two Drawer Cabinet Kit	813mm W x 940mm H x 711mm L	32" W x 37" H x 28" L	2205 lbs	1

GATOR MAXX G2

For residential or commercial applications. This new generation of intelligent polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering. Available in Beige, Slate Grey, Ivory (special order) and Black Diamond (special order).

SUPERSAND G2

For residential applications. This new generation of intelligent polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering. Supersand G2 is recommended for a variety of uses including pool decks, patios, footpaths, driveways, parking spaces, pavements, etc. Available in Beige and Slate Grey.

GATOR DUST POLYMERIC STONE DUST

For natural stone joints 1/2" to 6". It's ideal for pedestrian patios, walkways, pool decks and many more scenarios. Available in Beige or Grey.

GATOR NITRO SAND

Gator Nitro Sand is the ideal air cure, permeable jointing material. It is a ready-to-use mixture of calibrated sand and proprietary resin formula which cures when exposed to air, hardening from top to bottom of the joint. The product can be installed in wet or dry weather. Available in Black, Beige, Silver or Grey.

GATOR BASE

Gator Base replaces concrete foundations and is engineered to replace 6" of crushed stone. The interlocking panels distribute all dynamic and static loads to a very wide area, practically eliminating any pressure on the ground.

GATOR BLOCK XP XTRA POLYURETHANE ADHESIVE

XP XTRA performance polyurethane adhesive, low VOC is one of the strongest polyurethane adhesives on the market. It is specially formulated for overlays, pool copings, steps and wall caps, concrete pavers, wet cast, natural stones, retaining

GATOR EDGE FLEX AND RIGID

Made with 100% Polypropylene Copolymer giving this edging great strength and flexibility. Both the Rigid and Flex can be locked together with the "Twist & Lock" connection system. The Rigid could be transformed in a partial Flex by cutting the bridge support.

GATOR TILE EDGE

Gator Tile Edge is the fully customizable solution to run around the perimeter of your finished porcelain tile installation, providing stability and strong lateral support. Made with 100 % polyethylene.

GATOR BASE SCREWS

Fastening Gator Edge with the Gator Base Screws through the Gator Base reinforces the outside perimeter, creating a strong lateral support. Gator Base Screws are a required component on any Gator Base install.

GATOR NAILS

Alliance Gator Nails are high quality 10" common models. Gator Nails are designed for use with all Gator Edge types.

GATOR ROCK BOND LIQUID BINDING AGENT

Gator Rock Bond is a one component binder, that when mixed with clean and dry riverstone, granite, limestone or marble creates a durable yet solid permeable and decorative surface. Great for garden pathways where erosion and drainage is a concern.

GATOR ROCK AND BINDER KIT

Gator Rock Bond is a one component binder, that when mixed with riverstone creates a durable yet solid permeable and decorative surface. Great for garden pathways where erosion and drainage is a concern. Kits comes with Liquid Binding agent (473ml) and Riverstone (18 kg / 40 lb).

GATOR STONE BOND LIQUID STONE STABILIZER

Gator Stone Bond liquid stone stabilizer is a unique blend of polymers designed to bind together a wide variety of small aggregates commonly referred to as decomposed granites (dg): pathway mixes, crusher runs, concrete sand, etc.

GATOR FABRIC GF4.4 NON-WOVEN

Gator Fabric GF 4.4 Non-Woven geotextile is ideal for drainage and filtration allowing water to flow. Use for staircase, patios, walkways, driveways and retaining wall applications. It is non-biodegradable and resistant to most soil chemicals.

GATOR FABRIC GF5 WOVEN FABRIC

Gator Fabric GF5 is a woven geotextile made from polypropylene yarns. Use for driveways, parking lots, poor soil foundation reinforcement, (clay soils), retaining walls and permeable paver applications. It is inert to biological degradation and resistant to naturally occurring chemicals, alkali and acid.

GATOR FABRIC GF20

Gator Fabric GF20 polyspun is an excellent geotextile that protects against the growth of weeds. It is specially formulated to resist deterioration due to exposure to ultraviolet light and is inert to commonly encountered soil chemicals. GF 20 will not rot or mildew, and is non-biodegradable. Comes with a 20-year warranty.

GATOR CLEAN SHAMPOO

Gator Clean Shampoo removes ground-in dirt from the surface of concrete pavers, wet cast products and natural stones. It will make the pavers, patio slabs, walls & natural stones look clean and vibrant.

GATOR CLEAN EFFLORESCENCE CLEANER

Gator Efflorescence Cleaner will remove any efflorescence stains trapped in the concrete pavers, wet cast products and natural stone pores. It makes the surface look clean and vibrant without discoloring or damaging the surface.

GATOR SPACER (3 JOINT SIZES)

Provides uniform spacing, alignment with horizontal and vertical stability to porcelain tile installations. Spacers can be cut into half or quarter-units (using a utility knife) and used along the edge of a building or Gator Tile Edge. Available in 3 joint sizes: Black - 1/4" (6.4 mm), Grey - 3/16 (4.8 mm) and Blue - 1/8" (3.2 mm). 50 units per pack.

*Instructions and illustrations shown are a basic overview of paver and wall installation methods. Because installation methods vary per product, please refer to the Basalite product specific installation guide, the Standard ICPI installation method, ICPI.org or visit www.basalite.com.

*TYPICAL PAVER INSTALLATION

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 4"-6" for pedestrian and 6"-10" for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of sharp, normal-weight screening or concrete sand to a uniform depth of approximately 1" leveled to grade.
4. Install Basalite Pavers hand tight with joints approximately 1/8". Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry, fine, sharp sand over pavers.

*PERMEABLE PAVER INSTALLATION

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area in accordance to ICPI guidelines. Backfill and level Sub-base with No. 2 aggregate 2-1/2" crushed. Backfill and level base layer with No. 57 aggregate 3/4" crushed. The joint material and the foundation (paver bed, subbase, subgrade) must be permeable. 60mm thick pavers may be used in pedestrian applications.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of No. 8 aggregate 3/8" leveled to grade.
4. Install Pavers in closed assembly with spacer on stone for water drainage. Fill joints with gravel. Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry ASTM No. 8, 89 or 9 stones.

*Bayfield and Brisa Retaining Wall Systems can be used for gravity walls up to 3 feet high, including buried course, but excluding the cap. Taller walls can be built with the Retaining Wall System using geosynthetic reinforcement when designed by a qualified engineer. Height assumes level backfill and clean, compacted sand or gravel and no surcharge. Bayfield® and Brisa® Freestanding Wall Systems can be used for walls up to 3 feet high, including buried course, but excluding the cap.

*TYPICAL RETAINING WALL INSTALLATION

A. Prepare Base Leveling Pad
Excavate for the leveling pad. The trench should be at least 12 inches wider than the block you are installing and 6 inches deeper than the height of the block. Use a compactible base material of 3/4-inch minus (with fines) for the leveling pad. The pad must extend at least 6 inches in front of and behind the first course of

block, and be at least 6 inches deep after compaction. If the planned grade along the wall front will change elevation, the leveling pad may be stepped up in 6-inch increments to match the grade change. Start at the lowest level and work upward whenever possible. Compact the aggregate and make sure it's level front to back and side to side. Mist lightly with water before compaction.

B. Base Course
Begin laying block at the lowest elevation of the wall. For quick-leveling, use the Torpedo™ base block with the hand-holds down, or you can remove the rear lip of the block by hitting from the back so it will lie flat on the leveling pad. Place the first block level, front to back and side to side; lay subsequent blocks in the same manner, flush against each other. Make sure they are in full contact with the leveling pad. If the wall is on an incline, don't slope the blocks; step them up so they remain consistently level. For multiple-piece products, use the largest unit, 18 inches wide, for the base course. Complete the base course before proceeding to the second course. A drainage pipe should be placed at rear base of first course.

ner, flush against each other. Make sure they are in full contact with the leveling pad. If the wall is on an incline, don't slope the blocks; step them up so they remain consistently level. For multiple-piece products, use the largest unit, 18 inches wide, for the base course. Complete the base course before proceeding to the second course. A drainage pipe should be placed at rear base of first course.

C. Stacking and Fill
Place the second course of blocks on top of the base course. Remember to keep the wall on bond by placing units in a staggered relationship to the course beneath. Pull each block forward as far as possible to ensure the correct setback. Backfill with drainage aggregate directly behind the block, adding 6 inches at a time, followed by proper compaction. Add soil fill behind the aggregate. Compact before the next course is laid. With the top units dry and clean, stack the caps on top of the final row and use a masonry construction adhesive.

behind the block, adding 6 inches at a time, followed by proper compaction. Add soil fill behind the aggregate. Compact before the next course is laid. With the top units dry and clean, stack the caps on top of the final row and use a masonry construction adhesive.

*BRISA® FREESTANDING WALL INSTALLATION

A. Prepare Base Leveling Pad
Excavate a trench for the leveling pad to the lines and grades shown on the approved plans. The trench should be a minimum of 24 inches wide and 10 inches deep. Should the grade along the wall change elevation, step the trench up in equal block height increments so as to match the change of grade. Always start at

the lowest point and work upwards. Place a 3/4-inch minus crushed aggregate into the excavated trench; assure aggregate depth is at least 6 inches, and extends beyond the front and back of the block by a minimum of 6 inches. After placing the aggregate into the excavated trench, level the material and compact to 95% standard proctor.

B. Base Course
Place a level string line along the length of a wall and to the back top edge of the desired location of the blocks. Assure that the string is level and at the desired height of the first course of blocks. Begin stacking the blocks at the lowest point in the wall, work upwards by placing the Torpedo™ base block with the

hand-holds down to ensure proper contact with the leveling pad. As the blocks are placed, use a small level to assure that the blocks are level front to back and side to side. Utilize a 4-foot level to assure that a group of blocks are level side to side.

C. Stacking and Fill
Build the next course and glue to the base blocks. Work from the appropriate side of the pattern as you face the wall. Use 1/2-inch-diameter of glue 3 inches apart in the front half of the block. Build a separate wall on each side of the base unit. Maintain a consistent gap of roughly 1 inch between the parallel walls.

Continue to build one layer of the pattern on each side of the wall, maintaining a uniform distance between the two walls. Check horizontal and vertical levels of each wall. Periodically check the distance between the wall faces to ensure consistent spacing. Gaps will vary on curves. Flip blocks over on curves as needed. This reduces the need to cut blocks. Sweep all debris from the top course. Lay out all the caps onto the wall before gluing. Confirm the blocks are dry, then place a bead of masonry/concrete construction adhesive onto the top course of block, at the front and back of the block and along the entire length of the wall. Place the caps onto the adhesive and into the desired position.

*STONEWALL II INSTALLATION

A. Prepare Base Leveling Pad
Excavate trench 20" wide and 12" deep along the length of wall, assuring depth provides proper unit embedment. On sloped sites, step up 6"

to change elevation. Place 6" of 3/4"-1/2" crushed aggregate in the trench. Level, then compact to 95% or greater of standard proctor.

B. Set & Align Base Course
Starting at lowest elevation, ideally a corner, place and level the block using a string line and 2" level. Follow the suggested patterns as shown, or create your

own. Make sure the recess next to the center core is placed top up. Place alignment plugs into the center core following the guidelines below. Lay out the entire bottom course before proceeding to the next courses. Place perforated drain pipe onto leveling pad, behind base course (retaining wall) then backfill, 12" deep, to top of wall with crushed aggregate. Stack additional courses altering the pattern course to course.

C. 3-Way Alignment Plug (3WAP)
After stacking the block course, place a 3WAP into the core of each unit, assuring that the flange on the plug rests within the recess adjacent to the core. Orient the plug to achieve your desired wall batter. Use the setback position for retaining walls to achieve a 7.3 degree batter, the vertical position for bench walls, and the reveal position to occasionally highlight a unit.

D. Capping the Wall
Adhere clean and dry cap blocks to the wall using silicon concrete construction adhesive. Place cap flush to the wall face or with an overhang.

PAVERS vs. CONCRETE

DURABLE

Pavers are designed to meet or exceed 8000+ PSI. Standard concrete achieves only 2500-3000 PSI. This means the lifetime on your investment is much longer than a poured concrete or an asphalt application.

ATTRACTIVE/INCREASED CURB APPEAL

Pavers come in a wide variety of colors, shapes and textures providing limitless design advantages. Pavers are esthetically pleasing and a feature selling point of any home.

LONGEVITY

Paver installations are designed to last 50+ years and look great with minimum maintenance. Poured concrete typically needs to be replaced or have extensive maintenance every 20-30 years.

FLEXIBILITY

Tree roots are concrete's #1 enemy, with a paver system, if any invasive roots disrupt the system, it can be pulled back, addressed and re-installed.

HOME VALUE IMPROVEMENT

Homes with paver patios or driveways typically generate an increase in home value equal to investment made.

SAFETY

Pavers are slip-resistant and designed for vehicular or pedestrian applications and are great for a pool deck.

QUALITY

BASALITE® products are manufactured to conform to current California Building Code and ASTM standards and can be produced to conform to individual job specification by special order.

Variations in color and shade range are inherent in concrete products due to the variations in composition of aggregates, cement, oxide, and other variables resulting from the manufacturing and curing process. Submitted samples are to establish color range, size and texture. Subsequent shipments may vary from such sample. Split face units may vary in the degree of feature aggregates due to the mechanical distribution of aggregates and age of units at the time of splitting.

Efflorescence is a whitish residue that may appear on the surface of concrete products. The concrete is experiencing a natural process which is not harmful to Basalite pavers, walls or masonry products, this is not a defect.

Manufactured concrete products such as pavers, walls and cmu may become scratched/scuffed or “bruised”. Common causes are transportation, handling, and vibratory plate compaction. This is normal and not considered a manufacturer's defect. These marks will disappear over time.

It is the customer's responsibility to inspect all units delivered before installation. Any questions regarding quality, sizing, color uniformity within a shipment, or matching to prior shipments must be addressed by a BASALITE® representative BEFORE installation.

WARNING:

This product can expose you to chemicals including Silica, crystalline (airborne particles of respirable size), which is known to the State of California to cause cancer, and Lead and Lead Compounds, which are known to the State of California to cause birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.
