BUILDING VALUES

For almost 40 years, Basalite® has worked on growing our business by building relationships. We have created strong bonds with our dealers, masons, architects, engineers and licensed contractors. From working together with the common purpose of installing the finest hardscape products available, we have seen our products placed in settings that range from practical to magical. At Basalite®, we are committed to being the best in the industry. Our focus now, just as it was when we opened our doors all those years ago, is on service, quality and innovation. Those are the values that have made us the industry leader we are today and the same principles that will guide us far into the future.

ROSETTA® STEP COLLECTION

special order custom color

special order custom color

DESIGN FEATURE

The Rosetta® Step Collection provides the rugged attractiveness of natural stone, but with the safety and comfort of a uniform rise.

Sold as Basalite Combo Pallet Only

Name	Metric Units	U.S. Customary Units	Weight	Units/Pallet
Irregular Step A	432mm W x 140mm H x 1077mm L	1'-5" W x 5.5" H x 3'-6" L	289 lbs	1 in each size for a total of 6 pieces.
Irregular Step B	559mm W x 140mm H x 1372mm L	1'-10" W x 5.5" H x 4'-6" L	391 lbs	
Irregular Step C	610mm W x 140mm H x 1219mm L	2' W x 5.5" H x 4' L	424 lbs	
Irregular Step D	610mm W x 140mm H x 1524mm L	2' W x 5.5" H x 5' L	508 lbs	
Irregular Step E	660mm W x 140mm H x 1067mm L	2'-2" W x 5.5" H x 3'-6" L	390 lbs	
Irregular Step F	711mm W x 140mm H x 1219mm L	2'-4" W x 5.5" H x 4' L	415 lbs	
Dimensional*	457mm W x 178mm H x 1219mm L	18" W x 7" H x 48" L	455 lbs	6

*Palletized and sold separately.

NECESSARIES™ OUTDOOR LIVING KITS

DESIGN FEATURE
Each kit comes with everything you need to build!

Special Order Custom Color

Necessaries™ Outdoor Living Kits is a collection of affordable, ready-to-assemble outdoor fireplaces, waterfalls, bars, tables, fire pits, pillars, seat walls and outdoor kitchens. Visit basalite.com to view all available kits.

Printed colors shown in this brochure may vary from actual product colors. We recommend selecting colors from actual product samples.

NECESSARIES™ FIRE PIT KITS

Special Order Custom Color

GRAND AND VICTORIAN FIRE PIT KITS - EACH KIT SOLD SEPARATELY

Grand Fire Ring Kit With Ring

- Interior: 31" diameter
- Heavy gauge, U.S. Park Service quality solid steel insert protects block

Victorian Fire Pit Kit With Ring

- Four-piece, heavy gauge, solid steel insert protects block

Name	Metric Units	U.S. Customary Units	Weight	Pallets
Grand Fire Ring Kit	1219mm W x 305mm H	448" W x 12" H	1050 lbs	1
Victorian Fire Pit Kit With Ring	1219mm W x 305mm H x 1219mm L	48" W x 12" H x 48" L	1000 lbs	1

GRAND AND VICTORIAN ACCESSORIES - SOLD SEPARATELY

- Grand Limestone Caps
- 52" dia., 2.25" thick
 - Sold as a full set of 8 pieces
 - Silver Creek chiseled edge in limestone
 - Approximate weight 31 lbs
 - 1 pallet

- Grand E-Z Access Spark Screen
- 40" W x 18" H.
 - Approximate weight 22 lbs.
 - Keeps ash and sparks in, debris out
 - Hinged for easy access

- Grand Firegear 29" Round Pan With 22" Stainless Steel Burning Spur
- Match throw ignition kit

- Grand Galvanized Steel Cover
- Keeps children, animals and debris out
 - Heavy galvanized steel covers interior
 - With or without slot for cooking grate.

- Victorian Firegear 32" Square Pan With 22" Stainless Steel Burning Spur
- Match throw ignition kit

- Swivel Cooking Grate
- Heavy guage welded steel construction
 - ADA compliant
 - Removable
 - Anti-theft feature
 - For use with Grand or Victorian Fire Pits

- Fire Pits Log Set (log set only)
- Grand Canyon logs
 - For use with Grand or Victorian Fire Pits

SUPERSAND G2
For residential applications. This new generation of intelligent polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering. Supersand G2 is recommended for a variety of uses including pool decks, patios, footpaths, driveways, parking spaces, pavements, etc. Available in Beige and Slate Grey.

GATOR DUST POLYMERIC STONE DUST
For natural stone joints 1/2" to 6". It's ideal for pedestrian patios, walkways, pool decks and many more scenarios. Available in Beige or Grey.

GATOR BLOCK XP XTRA POLYURETHANE ADHESIVE
XP XTRA performance polyurethane adhesive, low VOC is one of the strongest polyurethane adhesives on the market. It is specially formulated for overlays, pool copings, steps and wall caps, concrete pavers, wet cast, natural stones and retaining.

GATOR HYBRID LOW GLOSS SEALER
Gator Hybrid Seal is an acrylic copolymer used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

GATOR EDGE FLEX AND RIGID
Made with 100% Polypropylene Copolymer giving this edging great strength and flexibility. Both the Rigid and Flex can be locked together with the "Twist & Lock" connection system. The Rigid could be transformed in a partial Flex by cutting the bridge support.

GATOR NAILS
Alliance Gator Nails are high quality 10" common models. Gator Nails are designed for use with all Gator Edge types.

EACO CHEM NMD80 NEW MASONRY DETERGENT
NMD 80 is a buffered acid-based new masonry cleaner designed for cleaning mortar smears off of new masonry structures. For use on a wide variety of substrates without harming the surface or color when used as directed. No scrubbing required. Available in 1 and 5 gallons.

GATOR CLEAN EFFLORESCENCE CLEANER
Gator Efflorescence Cleaner will remove any efflorescence stains trapped in the concrete pavers, wet cast products and natural stone pores. It makes the surface look clean and vibrant without discoloring or damaging the surface.

*The installation instructions and illustrations shown are a basic overview of paver and wall installation methods. Because installation methods vary per product, please refer to the Basalite product specific installation guide, the Standard ICPI installation method, ICPI.org, the NCMA-SRW installation guide, NCMA.org or visit basalite.com.

***TYPICAL PAVER INSTALLATION**

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 4"-6" for pedestrian and 6"-10" for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of sharp, normal-weight screening or concrete sand to a uniform depth of approximately 1" leveled to grade.
4. Install Basalite Pavers hand tight with joints approximately 1/8". Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry, fine, sharp sand over pavers.

***PERMEABLE PAVER INSTALLATION**

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area in accordance to ICPI guidelines. Backfill and level Sub-base with No. 2 aggregate 2-1/2" crushed. Backfill and level base layer with No. 57 aggregate 3/4" crushed. The joint material and the foundation (paver bed, subbase, subgrade) must be permeable. 60mm thick pavers may be used in pedestrian applications.
2. Install edge restraint using concrete curb, concrete toe or edging.
3. Place bedding course of No. 8 aggregate 3/8" leveled to grade.
4. Install Pavers in closed assembly with spacer on stone for water drainage. Fill joints with gravel. Where required, cut stones with an approved cutter to fit accurately.
5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
6. Fill voids in joints by sweeping dry ASTM No. 8, 89 or 9 stones.

***STONEWALL II INSTALLATION**

A. Prepare Base Leveling Pad
Excavate trench 20" wide and 12" deep along the length of wall, assuring depth provides proper unit embedment. On sloped sites, step up 6"

to change elevation. Place 6" of 3/4"-1/2" crushed aggregate in the trench. Level, then compact to 95% or greater of standard proctor.

B. Set & Align Base Course
Starting at lowest elevation, ideally a corner, place and level the block using a string line and 2' level. Follow the suggested patterns as shown, or create your

own. Make sure the recess next to the center core is placed top up. Place alignment plugs into the center core following the guidelines below. Lay out the entire bottom course before proceeding to the next courses. Place perforated drain pipe onto leveling pad, behind base course (retaining wall) then backfill, 12" deep, to top of wall with crushed aggregate. Stack additional courses altering the pattern course to course.

*The installation instructions shown are a basic overview of wall installation methods. Because installation methods vary per product, please refer to the Basalite® product specific installation guide, the NCMA-SRW installation guide, NCMA.org or visit basalite.com. Brisa® Retaining Wall Systems can be used for gravity walls up to 3 feet high, including buried course, but excluding the cap. Taller walls can be built with the Retaining Wall System using geosynthetic reinforcement when designed by a qualified engineer. Height assumes level backfill and clean, compacted sand or gravel and no surcharge. Brisa® Freestanding Wall Systems can be used for walls up to 3 feet high, including buried course, but excluding the cap.

***TYPICAL RETAINING WALL INSTALLATION**

A. Prepare Base Leveling Pad
Excavate for the leveling pad. The trench should be at least 12 inches wider than the block you are installing and 6 inches deeper than the height of the block. Use a compactible base material of 3/4-inch minus (with fines) for the leveling pad. The pad must extend at least 6 inches in front of and behind the first course of

block, and be at least 6 inches deep after compaction. If the planned grade along the wall front will change elevation, the leveling pad may be stepped up in 6-inch increments to match the grade change. Start at the lowest level and work upward whenever possible. Compact the aggregate and make sure it's level front to back and side to side. Mist lightly with water before compaction.

B. Base Course
Begin laying block at the lowest elevation of the wall. For quick-leveling, use the Torpedo™ base block with the hand-holds down, or you can remove the rear lip of the block by hitting from the back so it will lie flat on the leveling pad. Place the first block level, front to back and side to side; lay subsequent blocks in the same manner, flush against each other. Make sure they are in full contact with the leveling pad. If the wall is on an incline, don't slope the blocks; step them up so they remain consistently level. For multiple-piece products, use the largest unit, 18 inches wide, for the base course. Complete the base course before proceeding to the second course. A drainage pipe should be placed at rear base of first course.

C. Stacking and Fill
Place the second course of blocks on top of the base course. Remember to keep the wall on bond by placing units in a staggered relationship to the course beneath. Pull each block forward as far as possible to ensure the correct setback. Backfill with drainage aggregate directly behind the block, adding 6 inches at a time, followed by proper compaction. Add soil fill behind the aggregate. Compact before the next course is laid. With the top units dry and clean, stack the caps on top of the final row and use a masonry construction adhesive.

C. 3-Way Alignment Plug (3WAP)
After stacking the block course, place a 3WAP into the core of each unit, assuring that the flange on the plug rests within the recess adjacent to the core. Orient the plug to achieve your desired wall batter. Use the setback position for retaining walls to achieve a 7.3 degree batter, the vertical position for bench walls, and the reveal position to occasionally highlight a unit.

***BRISA® FREESTANDING WALL INSTALLATION**

A. Prepare Base Leveling Pad
Excavate a trench for the leveling pad to the lines and grades shown on the approved plans. The trench should be a minimum of 24 inches wide and 10 inches deep. Should the grade along the wall change elevation, step the trench up in equal block height increments so as to match the change of grade. Always start at

the lowest point and work upwards. Place a 3/4-inch minus crushed aggregate into the excavated trench; assure aggregate depth is at least 6 inches, and extends beyond the front and back of the block by a minimum of 6 inches. After placing the aggregate into the excavated trench, level the material and compact to 95% standard proctor.

B. Base Course
Place a level string line along the length of a wall and to the back top edge of the desired location of the blocks. Assure that the string is level and at the desired height of the first course of blocks. Begin stacking the blocks at the lowest point in the wall, work upwards by placing the Torpedo™ base block with the

hand-holds down to ensure proper contact with the leveling pad. As the blocks are placed, use a small level to assure that the blocks are level front to back and side to side. Utilize a 4-foot level to assure that a group of blocks are level side to side.

C. Stacking and Fill
Build the next course and glue to the base blocks. Work from the appropriate side of the pattern as you face the wall. Use 1/2-inch-diameter of glue 3 inches apart in the front half of the block. Build a separate wall on each side of the base unit. Maintain a consistent gap of roughly 1 inch between the parallel walls.

Continue to build one layer of the pattern on each side of the wall, maintaining a uniform distance between the two walls. Check horizontal and vertical levels of each wall. Periodically check the distance between the wall faces to ensure consistent spacing. Gaps will vary on curves. Flip blocks over on curves as needed. This reduces the need to cut blocks. Sweep all debris from the top course. Lay out all the caps onto the wall before gluing. Confirm the blocks are dry, then place a bead of masonry/concrete construction adhesive onto the top course of block, at the front and back of the block and along the entire length of the wall. Place the caps onto the adhesive and into the desired position.

D. Capping the Wall
Adhere clean and dry cap blocks to the wall using silicon concrete construction adhesive. Place cap flush to the wall face or with an overhang.
